

Assessing Post-Disaster Needs in Nigeria

RESULTS & ACHIEVEMENTS

- The PDNA utilized extensive partnerships —such as the United Nations, the European Union, and others—to deliver a final report on a relatively rapid timescale.
- After comprehensive analysis of damages and losses across a wide spectrum of sectors, teams identified the need for more than \$7 billion in necessary recovery funding.
-

LESSONS LEARNED

Field data and evidence. The PDNA following the 2012 floods made clear the value of in-depth, sector-specific analysis of disaster impacts, which speeded targeted response and recovery efforts. These included consultations and surveys covering 4,000 households in over 300 settlements to assess social and livelihood impacts.

Strategic engagement. The PDNA was one of several projects that highlighted the importance of disaster risk reduction in sustaining economic growth in Nigeria, and played a central role in making disaster risk management integral to the World Bank's proposed 2013-2017 Country Partnership Strategy for development.

Partnership and accountability. The success of the PDNA resulted from effective collaboration among the many actors, including the UNDP, EU, UNICEF, the UN Human Settlements Programme, the International Labour Organization and others—highlighting the importance of technical and logistical partnerships.
